Accompanying narrative

In June 2026, CET1 Capital increased compared to March 2026 mainly due to the increase in Share capital. Similarly, Tier 1 Capital increased due to the increase in CET1 Capital. Further, Tier 2 Capital slightly increased compared to March 2026 mainly due to the increase in accrued interest and increase in provision.

All risk-based capital ratios remained relatively the same in June 2026 compared to March 2026 despite the increase in CET1, Tier 2 Capital, and total risk weighted assets.

In June 2026, the Bank-specific countercyclical capital buffer (CCyB) requirement increased compared to the previous reporting period mainly due to the increase in the minimum CCyB rate applicable to Saudi Arabia from 0% to 1% starting May 2026.

The average LCR decreased in June 2026 to 138.67% compared to 145.44% in March 2026, reflecting a decrease of 6.77% between the two periods. The decline is mainly due to decrease in one-month inflows

NSFR decreased in June 2026 to 111.98% compared to 113.40% in March 2026, reflecting an decrease of 1.42% between the two periods. The decrease is mainly due to the decrease in total customers deposits

Accompanying narrative

The geographic break down of the Bank's private sector credit exposures is based on the locations of the counterparties that make up the capital charge, irrespective of where the Bank is physically situated or its country of incorporation. This location is determined by the "ultimate risk" concept in alignment with Bank for International Settlements(BIS) guidelines. The countercyclical capital buffer rates are specified in accordance with the announced countercyclical capital buffer add-on rate to the relevant jurisdictions.

In June 2026, the Bank-specific countercyclical capital buffer (CCyB) requirement increased compared to the previous reporting period mainly due to the increase in the minimum CCyB rate applicable to Saudi Arabia from 0% to 1% starting May 2026.

Accompanying narrative

In June 2026, on balance sheet exposures decreased compared to March 2026 mainly due to the decrease in Cash and balances with Saudi Central Bank (SAMA). SFTs did not show material movements over the reporting period. However, off-balance sheet items decreased mainly due to a decrease in transaction-related contingencies and irrevocable commitments to extended credit.

Accompanying narrative

The asset class compositions have remained relatively stable since March 2026, resulting in a consistent RWA density. The process for applying credit conversion factors (CCFs), provisioning, and credit risk mitigation measures adheres to the SAMA minimum capital requirements for credit risk issued in December 2022. For exposures related to off-balance-sheet items, the exposures are first converted into credit exposures according to the prescribed CCFs. Next, these adjusted credit exposures are subtracted from the eligible provisions. Finally, the adjusted credit exposures, which account for both CCFs and provisions are further adjusted by subtracting/substituting them with eligible credit risk mitigations (CRMs) to derive the final RWA calculations.
